Executive Summary

Senior UX Designer with a Ph.D. in Human-Computer Interaction, combining empirical research methodology with deep expertise in AI-integrated multimodal user experiences. Skilled in architecting natural conversational interfaces, context-aware engagement, and connected device ecosystems for large-scale consumer products. Translates nuanced user insights and complex interaction data into scalable, high-impact UX strategies that elevate next-generation smart experiences.

Work Experience

Mar. 2026 -
 Present

Samsung Electronics (Visual Display Business), Seoul

Role: Senior Designer (UX Team)

- Architecting AI-driven multimodal user experiences, focusing on natural conversational interactions and personalized context-aware engagement
- Leading end-to-end UX strategies for home audio ecosystems to deliver seamless connected sound experiences across smart devices

Jan. 2020 -
 Jul. 2022

Krafton (PUBG Studio), Seoul

Role: UX Designer

- Designing user experience (UX) for the lobby screen (outgame) of Battleground Game and constructing design systems for effective development
- Conducting design research to induce user retention

Jan. 2017 -
 Feb. 2017

ITNJ (Start-up), Ulsan

Role: UX Research Assistant / Product Designer

- Developing online educational content and designing a portable tablet cradle
- Discovering new businesses based on the experiences of people using tablet PCs and designed the cradle to install the tablet

Jun. 2014 -
 Dec. 2015

Coin-Cloud (Start-up), Daejeon

Role: CEO / Designer

- Developing a coin accumulation system using smartphones to reduce coin issuance cost
- Participating in a start-up competition hosted by KBD Industrial Bank and attracted investment from companies

Education

Sep. 2022 -
Feb. 2026

Korea Advanced Institute of Science and Technology (KAIST)

Ph.D / Industrial Design

Thesis: *Designing Personal Informatics Systems for Mental Well-being through Proactive Engagement and Social Practices*

Committee: Hwajung Hong (Chair), Taekjin Nam, Uichin Lee, Takyeon Lee, Janghee Cho

Mar. 2016 -
Feb. 2018

Ulsan National Institute of Science and Technology (UNIST)

Professional Master of Design-Engineering

Thesis: *Designing Toolkits for Self-Tracking and Self-Intervention to Improve Mental Health*

Advisor: Professor Hwajung Hong

Feb. 2010 -
Feb. 2016

Korea Advanced Institute of Science and Technology (KAIST)

Bachelor of Science / Industrial Design

Research Experience

Aug. 2022 -
Feb. 2026

Stress Management by Developing Digital Twins (@ KAIST)

Supported by the Institute of Information & communications Technology Planning & Evaluation (IITP)

Role: Project Manager, Research Assistant

- Developing human digital twins technologies for the prediction and management of emotional workers' mental health
- Conducting user research to explore how people perceive their emotions in the workplace with a smartphone application through data tracking and how they interact with data to relieve stress

Apr. 2018 -
Dec. 2019

Positive Computing through Persuasive Interactions (@ Seoul National University)

Supported by the Institute of Information & communications Technology Planning & Evaluation (IITP)

Role: Research Assistant

- Conducting a preliminary study on developing tools that can help manage stress by predicting and planning interventions
- Designing a calendar-based smartphone application for stress management and conducting user research to understand how people anticipate their daily stress based on the event, and how they mediate stress with an intervention

Feb. 2017 -
Sep. 2017

U-Glass Project (@ UNIST)

Role: Project Manager of the design team

- Developing auxiliary tools for an exhibition based on augmented reality (AR) technology

- Managing the design team to create a content scenario for experiencing museum exhibits with AR glasses and conducting user research to explore what will be an engagement factor in an immersive environment

Patent

July, 2017

Holder for embedding a tablet

Role: Lead inventor

Patent No. KR2020170003972 (Expired)

April, 2020

Calendar-based intelligent stress management system and method

Role: Lead inventor

Patent No. KR1024349770000 (Granted)

August, 2023

MindBattery provision system and method for improving emotion

Role: Lead inventor

Patent No. KR1020230109004 (Patent Pending)

Teaching Experience

Teaching Assistant

Fall, 2016

Design Knowledge and Skills (Intro to Information Visualization)

Course: IID231, +20 students, UNIST

- An undergraduate course for teaching basic knowledge, tools, and practical skills for visualizing information with data.
- Provided feedback in the weekly one-on-one instruction session, guiding individual project development.

Spring, 2023

Needfinding Practice

Course: KEI430, +20 students, KAIST

- An undergraduate/graduate course for teaching design thinking based on observation of user behaviors.
- Provided feedback on the weekly group project development.

Award

April, 2018

Outstanding Presentation Award
